Chopra speaks on potential of CoverCress

By Lucas Shivers

Scientist Ratan Chopra, who serves as vice president of research at CoverCress, Inc., hopes to develop a common weed into a valuable biofuel feedstock crop.

"There are so many reasons why Cover-Cress is coming up now as a way to diversify our cropping systems," said Chopra. "We have gone from a weed to a crop with multiple downstream benefits."

As a potential new rotation in cropping systems, Chopra aims to create an oil-rich plant known as field pennycress into a new crop called CoverCress.

K-State's Department of Agronomy featured Chopra's work at the 37th annual Elmer G. Heyne Crop Science Lecture on April 9 at Throckmorton Plant Sciences Center.

"It gives me great honor to welcome this pioneer in field pennycress domestication," said Mike Stamm, a K-State canola breeder and chair of the lecture committee. "We're so fortunate to have this lecture. We hope to learn about the vast interest in bio-renewable alternatives and sustainable feed crops."

Chopra leads the CoverCress product design division after a time in academics and research. The St. Louis-based company was formed in 2013 to develop field pennycress as a climate-smart agriculture product that contributes to the reduction of greenhouse gas emissions through carbon sequestration and mitigation.

Demand of OilseedsStarting with the de-

Starting with the demand and need, Chopra shared that a majority of the greenhouse gasses are coming from burning fossil fuels.

"Energy is required to be successful," said Chopra. "We need en-

Scientist Ratan Chopra, who serves as vice president of research at CoverCress, Inc., spoke at the 37th annual Elmer G. Heyne Crop Science Lecture on Aprill 9 at Kansas State University.

ergy for our daily life. We've had lots of discussion to move towards less pollution and a lower carbon footprint. While there's no perfect climate change solution and we need all of the options, we're focused on feedstocks with CoverCress."

By shifting towards low-carbon energy rather than fossil fuels, there is expected demand of 6.5 billion gallons of renewable biofuels by 2030. Today, there are only about 1 billion gallons showing that need. It translates into more than 18 million new acres of soybeans to meet this need as one example.

"To protect the land, soil and water, we need a functional winter crop to help improve the ecosystem," said Chopra. "Crops like CoverCress help with this opportunity."

CoverCress draws from traditional and modern technology to produce a marketable crop for both animal feed and fuel.

"This is a huge new economic opportunity for producers to improve soil health to reduce nutrient runoff and sequester carbon," Chopra said. "It can deliver incremental farm revenue as a new rotational crop transforming the corn and soy rotation with a new cash crop."

Exploring New Options

CoverCress leverages land and existing farm equipment during off-season resulting in ultra low carbon intensity scores.

"The big ambition of CoverCress is to convert a productive plant from a weed known as 'field pennycress.' It can be a weed found in almost every state

and naturalized in the U.S. after originating in Eurasia. It's part of the Brassicaceae family. It survived and evolved for the harsh winters with high oil content of around 35% and 25% of protein."

Field pennycress, a flowering plant in the cabbage family, is sometimes considered a nuisance weed, but it is also oil-rich. It is an ideal candidate for healthy edible oils, biodegradable plastic packaging materials, lubricants and biofuels.

"There is great investment and anticipation surrounding the renewable diesel economy across the U.S., and as a result, there is a significant new demand being placed on approved oilseed feed-stocks," said Stamm.

CoverCress is being studied as a poten-

tial oilseed feedstock cropping system. For example, Stamm said CoverCress has been successfully integrated into traditional corn-soybean rotations in test plots.

Scientists thought it made a lot of sense to explore CoverCress since 2005 with many universities before going with a private company in 2013. Federal agencies have invested over \$50 million with more than 50 labs currently working on the crop.

The University of Minnesota and Western Illinois University have stepped up academic and industry partnerships with significant contributions.

"It takes a lot of investment and research," said Chopra. "The meaningful target to hit is 1350 pounds per acre to make it worth it. All of the background has been very helpful in the gene space and closely related to other easily gene-edited transformations."

Updated Traits

The CoverCress team has made significant capacity improvements to make it meaningful for production. As a significant step forward, CoverCress transformed from black to yellow seed color with increased germination and reduced dormancy.

"Pennycress can persist up to ten years, so it becomes a management issue," said Chopra. "The yellow seed color gives a new trait in CoverCress that helps with limiting persistence on seed longevity and viability under various stress conditions."

Scientists also reduced the erucic acid traits in the crop that is not suitable for livestock feed or human consumption. However, the new edits have traits that make it more desirable for chicken

tial oilseed feedstock feed and biodiesel. cropping system. For example, Stamm said reduce pod shattering CoverCress has been to increase yields.

"We've edited 20 genes to find the desired traits by knowing about five genes to vary the levels of crossing strategies to enable testing with approvals to get into the crushed meal market of animal feed," he said.

The goal is to have a crushed-ready product by 2027 to try to harvest at the right time with other crops.

"For example, in southern Illinois we hope to learn how to plan the planting season to get CoverCress out of the field and harvested by mid-May," said Chopra.

As a first step in building capacity with more acres, the team is looking at a farm-to-fuel supply chain in a closed loop system with direct contracts, Chopra said.

Lecture Honors

The Elmer G. Heyne Lectureship enhances the training offered at K-State in crop science by providing opportunities for students and faculty to benefit from personal interaction with outstanding scholars and leaders.

"Dr. Heyne was a wheat breeding pioneer in his time," Stamm said, "so this topic is fitting for a lecture that commemorates his many accomplishments."

Heyne joined K-State's Department of Agronomy in 1938, embarking on a career marked by numerous scientific achievements that improved wheat quality, resistance to disease and various plant breeding techniques. During his tenure, he released three corn lines, four sorghum lines, one barley variety, six oat varieties and ten wheat varieties.

American Agri-Women hold national meeting in Manhattan

By Donna Sullivan, Editor

A merican-Agri Women held their midyear meeting in early April in Manhattan, with members attending from Maine, California, Texas, Nevada, Utah, Florida, Minnesota, Michigan, Wisconsin, Oregon and Kansas.

"The mid-year meeting is all about policy," said AAW president Rose Tryon of California. She explained that they look at every policy statement to determine if it's still valid or if changes are in order. "If there are certain things that are happening within ag or certain policies coming up, or we see them on the horizon, we start to address them early on," she said. Once the policy positions are in place, the organization writes white papers that they will take with them to their fly-in meeting in Washington D.C. in June.

This year they are

holding an expanded fly-in meeting, inviting women from all over the country to join them. Along with visiting with the legislators for their respective states, there will be an embassy visit as well as meetings with USDA, EPA and other organizations. Each year there is also a symposium on a specific topic, this year's being "Climate Change at What Cost?

"A lot of the climate smart, conservation kinds of things they have coming in that USDA is pushing, doesn't fit for all farms, or fit in all communities, or all states or for all soil types," Tryon said. "We have a big concern that they are going to tie those conservation practices to markets, so it would almost end up like a social credit score like we see in China or other countries. So that's a bit concern for us too, that a lot of times these policies are made but don't have input from the people that are actually farming the ground."

"These policies are already impacting farmers," said Chrissy Wozniak of Florida, vice president of communications. "Just last month I sat with a grower of 13,000 acres of watermelons and pumpkins and he said their main buyer is Walmart and they have to go through their entire Climate Smart policy just to sell to them. So it's already impacting farmers and we have to just be aware and make other people aware."

"That will be part of our conversation when we get to Washington D.C. to speak to the legislators and say, "Look, this is not working," Tryon added.

Jean Goslin, vice president of education from Riley County, was instrumental in planning the meeting, with help from her Kansas members. "We have a good core group here in Kansas," she said.
"We're not real big,
there were six of us
that put this on. Kansas seems to be a place
people will gravitate
to, they like to come to
Kansas."

On Friday afternoon, the women heard speakers from the National Bio and Agro- Defense Facility (NBAF), including Stephanie Jacques, public relations specialist, Dr. Maggie Behnke, supervisory veterinary and Alina DeLaMota, microbiologist. That evening they went to Lazy T Ranch near Zeandale for supper and entertainment.

Pictured back row from left are: Jean Goslin, Kim Bremmer, Jerilyn Longren, Lana Meyer, Lisa Nichols and Rose Tryon. Front row: Donnelle Scott and Wanda Kinney.

Cat's Tale A Farm

By Kim Baldwin, **McPherson County** farmer and rancher

We adopted him from a nearby city animal shelter's barn cat adoption program. They adopted him out to us because he was deemed "too bite-y" to be a house cat.

An expert mouser with some serious cattitude, he rotated his time between our shop, farm office and barn.

He viciously clawed

my office chair one afternoon when I turned off his Netflix. He'd let you know when he was annoyed with you with his loud meow or his claws to the back of your leg. He also let you know when he wanted your affection when he'd sneak up behind you and bite you before flopping down by your feet expecting a belly rub.

He'd sprawl out on window ledges and sleep for hours until I'd come into the office. I swear he'd wait for me to look over at him once I was settled at my desk before he'd push a plant, pot or coffee mug off the ledge all while maintaining eye contact with me.

He tolerated our farm dog, Rosie, in her puppyhood. He followed us when we went on hikes through the cattle pastures always letting us know of his presence by his continuous and loud complaints regarding our outings. More often than not, after hearing too many of his growling meows, one of us would give in and carry

that fat cat back to the shop.

He had a special gift of getting right in your face when working on equipment and making his presence known during Zoom calls.

Mr.Gray disappeared about a year ago. We assumed a coyote got the old boy.

However, we recently received a call from the City of Wichita telling us that they had our cat. We didn't have a missing cat.

They said they had a cat that was microchipped and registered to us.

Mr. Gray was back from the dead!

I made the hour-long

drive down to Wichita to bail him out of cat iail.

After a year of adventures that landed him in the Big House down in the city, Mr. Gray is back on the farm. He spent a few hours in the tractor with my husband before we released him back into the shop and office later that after-

He left an offering for us a few hours later in the form of two mice he'd caught and put in his litter box.

noon.

He's now returned to patrolling the farm, sneaking up behind me and nipping the back of my leg while I work at my desk, sharpening his claws on my office chair, and overseeing us while working on equipment — always from somewhere above

We don't know what his time away from the farm was like, but Mr. Gray has definitely made sure that we know he's back and that he hasn't changed one

"Insight" is a weekly column published by Kansas Farm Bureau, the state's largest farm organization whose mission is to strengthen agriculture and the lives of Kansans through advocacy, education and ser-

ational Wheat Yield Contest accepting entries until May 15

Catch a break from Mother Nature with moisture this winter? Have a sweet spot with an excellent stand thanks to perfect planting and growth conditions? Kansas Wheat encourages growers with renewed enthusiasm for this year's harvest to enter the ninth annual National Wheat Yield Contest, which is accepting entries now until May 15 for winter wheat categories.

'We are so thrilled to launch this new website where contestants will find it easier to enter, even using their cell phones," said Anne Osborne, NWF yield contest director, in a press release. "The data analysis is improved on this new website, so we can continue to share production practices that lead to winning yields and top quality.'

The National Wheat Yield Contest is organized by the National Wheat Foundation. The 2024 categories include irrigated winter wheat, dryland winter wheat, irrigated spring wheat and dryland spring wheat. The contest will name 26 national winners, including state winners. All national winners will receive a trip to the 2025 Commodity Classic to be held March 2-4, 2025, in Denver.

Contest fields must be at least five continuous acres planted with professionally produced, certified, branded and newly purchased wheat seed. The field must be verified by a third-party supervisor during harvest of the contest field. Entries cost \$100, with vouchers available from contest sponsors.

Contest rules also require growers to retain a ten-pound sample of grain from their entry, which will be milled, baked and evaluated for quality if the entry places nationally. For each class, the three highest ranking samples for quality will be recognized and awarded an additional \$250.

In last year's contest, William Noll of Winchester had the top yields for both dryland and irrigated winter wheat categories. His dryland entry of AgriMaxx 516 soft red winter wheat yielded 103.99 bushels per acre, while his irrigated entry of AgriMaxx 505 soft red winter wheat yielded 121.1 bushels per acre. Second prize in the state's dryland winter wheat category was awarded to Matt Grabbe of Hays with a sample of WestBred WB4792 that yielded 79.18 bushels per acre, the same variety with which he won third place in the previous year's contest.

Partnering sponsors for the 2024 National Wheat Yield Contest include WestBred, John Deere, BASF, U.S. Wheat Associates, The McGregor Company, Croplan, Limagrain, Ardent Mills, AgriMaxx, Bushel, DynaGro, Eastman, Kentucky Small Grain Growers Association, Mennel, North Carolina Small Grains, Ohio Corn & Wheat, Siemer Milling Company, USG, Grain Craft, Kansas Wheat, Miller Milling, Montana Grain Growers Association, ND Mill & Elevator and PlainsGold. DTN/Progressive Farmer is the competition's official media outlet.

Growers have until May 15 to submit their entries. Enter the National Wheat Yield Contest or learn more about the contest at: wheatcontest.org.

Kansas entrants must be members in good standing of the Kansas Association of Wheat Growers, so renew your membership today at kswheat. com/KAWG.

Sorghum producers seeks new leaders for national board of directors

National Sorghum Producers has opened applications for two positions on the 2024 board of directors. NSP is looking for new pro-

ducer leaders who are passionate about advancing the crop and shaping the future of the sorghum industry.

"Today, the sorghum

industry stands at a crossroads of tradition and innovation, and as your board chairman and a fellow farmer, I'm

reaching out to those

among you who are driven to make a meaningful difference," NSP chairman Craig Meeker said. "We are eager to welcome new voices, ideas and perspectives that will help usher in a new era for our industry. If you have a passion for advocacy and a vision for sustainabil-

ity, I encourage you to

apply."

Board members are instrumental in advancing policies and building relationships that benefit sorghum farmers and the industry. Candidates should be NSP members passionate about advocacy and fundraising, with a vision to advance the industry. No prior board

experience is necessary to apply. 'We are looking for

proactive leaders eager to drive the sorghum industry forward," NSP CEO Tim Lust said. "Our farmer-led board of directors plays a crucial role in advocating for sorghum farmers and ensuring NSP's strong representation in Washington, D.C. It's about advocacy, vision and making an impact."

Applications due Friday, May 10, 2024, at 5 p.m. Central time. After the application deadline, the NSP Nominating Committee will review all applications before making nominations to the NSP Board of Directors for consideration and election during the August summer board meeting. Selected members will serve a three-year term, beginning October 1, 2024 — the start of NSP's fiscal year.

For the application and more information, visit SorghumGrowers. com/leadership/.

I have always wondered what my superpower was, and I think I have finally figured it out. My superpower is definitely the ability to be able to throw a monkey wrench into even the most perfect of daily plans. The ability to snatch defeat from the jaws of victory. I have heard it said that nothing is foolproof to a sufficiently talented fool, and I am living proof of that. Well, let me give you an example from earlier today.

The day started off well enough. I knew I needed to make a quick run to where we have meat stored and replenish the stock at our house. I had a couple of big orders, and we were out of a couple of cuts, so I really had to make a run. Monday was the only day I had available, so I decided to try to get chores done early and go.

I did manage to get chores done early-ish. There was an issue with the newly weaned lambs getting out and between them not being able to see an open gate and Roo, the sheep dog, being a little too aggressive, that took longer than it should have. Then there were two cows out and we replayed the whole scenario with the sheep. But overall, I got chores done at a decent hour and got on the road when I had planned.

The trip went uneventfully, including driving during the eclipse. I was completely underwhelmed by the eclipse. It did not even get dark, I really don't understand what all the hubbub was about. I got back to my house and got the meat unloaded and organized in the freezer in suitable time and had a little bit before making my delivery in Topeka.

I needed to get mineral for the cows and tried to decide if I had enough time to go into town and back, then leave for my delivery punctually. I decided I did if everything went according to the plan. What do you know, the trip went smoothly, and I was even a little earlier than I had planned, which is a good thing when making deliveries. I have been known to get lost and end up late. Remember what I told you about my superpower? Well, I have had some interesting late deliveries that should have been early. But not today, this plan was foolproof and everything was going as

planned.

I had even thought ahead enough to have bagged up the meat for the delivery and placed it in the freezer so I could just grab it and go. I was proud of myself for being able to get a task done that I had not planned on and still be on time. I basked in this glory as I turned up the tunes in the car and headed to Topeka.

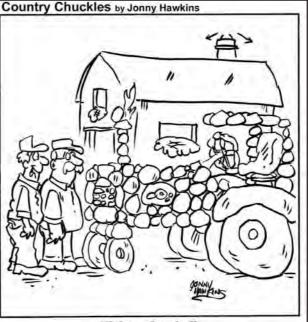

I plugged the address into the navigation system, and it was going to be easy to find. Life was good, the map showed that I would be about ten minutes early. I was really impressed with my planning ability. That was when Jennifer called. She was just getting off work and was coordinating with me as to what needed to be done at home. I proudly told her my story and that was when it hit me. I had not grabbed the pre-loaded bag in the freezer. The only redeeming thing was that I realized this omission fifteen minutes from home and not on the customer's doorstep. I turned around and raced home.

I texted my customer to let her know I was going to be and started back down the same road I had just traveled. The navigation system on the car was very confused. That was when the low fuel light came on.

Somehow in the middle of all of this I did make it to the customers house and was only thirty minutes late in the end. I suppose in the grand scheme of my life, that's not a big deal. My customer was a new one and she said she had been running late too so it was no problem. With any luck she will be a returning customer and she will realize that all of this is only normal operating procedure for me.

I suppose that being faster than a speeding bullet, having superhuman strength or being able to be invisible are all superpowers that would be fun, but they have been done so much that they are boring. Being able to be late when everything goes right. Now that is interesting.

So, step aside Man of Steel, Wonder Woman, Spiderman or the Incredible Hulk, there is a new character in town, Tardy Man will save the day. Of course, I will be there about thirty minutes after the bat-signal goes up.

"It's a classic."

Farm Service Agency offers retroactive four county wildfire recovery assistance for winter grazing losses

The U.S. Department of Agriculture is expanding emergency wildfire recovery assistance through the **Emergency Assistance** for Livestock, Honeybees, and Farm-Raised Fish Program (ELAP) for producers who were impacted by the Four County Fire that started on Dec. 15, 2021.

USDA's Farm Service forages that were left compensation to pro-Agency (FSA) is retroactively implementing a 365-day grazing period for perennial forage that was intended for grazing during calendar year 2021 in Ellis, Rooks, Russell and Osborne and contiguous counties.

Producers who raised grass and other

ing. This advantage is

attributed to resource

standing for winter grazing can now apply for ELAP assistance. The 60-day special enrollment period opens April 8 and closes June 7, 2024, for 2021 winter grazing losses on native grass and perennial forage, caused by wild-

"To offer critical

ducers who suffered lost forage and grazing, FSA has modified the grazing period for 2021 wildfire losses to make these winter grazing losses — that were originally considered outside of the normal grazing period — eligible for ELAP assistance," said Dennis McKinney, rector in Kansas.

Eligibility

This expanded program policy only applies to losses on native grass or other perennial forage intended for grazing that would now qualify under the 365-day grazing period. Only losses caused by wildfire between Oct. 16

FSA state executive diaand Dec. 31, 2021 are eligible. Producers must have had a risk in the eligible grazing land and the eligible livestock at the time the loss condition occurred.

More Information

For more information on ELAP assistance or to apply, contact your local USDA Service Center.

avigating the pros and cons of early planted soybeans pared to delayed plant-

Recently, many studies have focused on the benefits of early planted soybeans. One such study even focused on varietal maturity selec-

ant is planting date in relation to soybean reproductive duration? The reproductive stage for a soybean plant occurs from R1 to R6, or from when a soybean begins to flower to when pods fully develop.

Research consistently demonstrates that the timing of soybean planting influences soybean yield. Early planting offers a distinct advantage, resulting in higher yields com-

GRASS Our Daily Bread & GRAIN

Allison Kurtz, Westphalia, Wins Weekly Grass & Grain Recipe Contest & Prize

Winner Allison Kurtz, Westphalia: **GARLIC & CHEDDAR BISCUITS**

2 cups all-purpose flour

1 tablespoon baking powder

1 teaspoon salt

1 cup shredded Cheddar cheese

1 teaspoon dried parsley flakes 1 1/2 teaspoons garlic powder, divided

1/4 cup shortening

1 cup milk

5 1/2 tablespoons butter, melted

Heat oven to 450 degrees. In a large bowl combine flour, baking powder, salt, cheese, parsley and 1/2 teaspoon garlic powder. Cut in shortening with pastry blender until mixture resembles cornmeal. Stir in milk. Drop dough by the tablespoonfuls onto a large, greased baking sheet. Bake 12 minutes (or until done). When biscuits are done, quickly brush with melted butter mixed with 1 teaspoon garlic powder. Makes approximately 16 biscuits.

Katrina **Americus:**

COCONUT **CUSTARD PIE**

Morgan,

1 cup sugar 1/4 cup margarine 4 large eggs 1/4 cup flour 2 cups milk 1 cup coconut 1/4 teaspoon salt 1/2 teaspoon baking powder

1 teaspoon vanilla

Blend ingredients in a blender or use a hand blender. Pour into a greased 10-inch pie plate. Bake in a 350-degree oven for 40-50 minutes or until set up in the middle. Refrigerate when cool.

Jackie Doud, Topeka: **BRUSSELS SPROUTS** pound brussels sprouts, halved 2 tablespoons olive oil 1/2 teaspoon salt, divided

2 tablespoons mayonnaise

2 tablespoons maple syrup

Set oven to 425 degrees. Place brussels sprouts on rimmed baking sheet. Drizzle with 1/4 teaspoon salt. Roast until crispy, 20-25 minutes. Mix mayonnaise and syrup; add brussels sprouts and toss to coat. Sprinkle with remaining salt.

Kimberly Edwards, Stillwater, Oklahoma:

STRAWBERRY BUTTER 6 large strawberries 1 cup softened butter

1/2 cup powdered sugar In a food processor pulse strawberries until chopped. Add butter and powdered sugar.

Refrigerate. **** Millie Conger, Tecumseh: **BEEF DISH**

Process until blended.

2 pounds stew meat, cut into 1-inch pieces

1 envelope onion soup mix 1 can cream of mushroom soup

4-ounce can sliced mushrooms

1/2 cup beef broth or water

Rice or chow mein noodles Place meat in crockpot. Mix onion soup mix, cream of mushroom soup, mushrooms and broth or water. Pour over meat. Cook on low 8-10 hours or high 5-6. Serve over rice or chow mein noodles.

Place Mats To Mrs. Myles Korinek, Ellsworth

· Mrs. Myles Korinek, Star Route, Ellsworth, wins a set of place mats for her recipe contest entry. Mrs. Korinek writes: Since this is the month to use cherries, I have a delicious Cherry Spice Cake. It is very simple to make.'

CHERRY SPICE CAKE

Cream together:

1 cup sugar

½ cup oleo Add:

1 teaspoon vanilla can drained cherries (regular size can)

Next add:

11/2 cups flour teaspoon soda

4 teaspoon cloves

teaspoon cinnamon teaspoon nutmeg

/8 teaspoon salt Bake in 9-inch square pan. Bake at 375 degrees for 30 to 35 minutes. Use a caramel frosting. "Delicious! Try it—your guests will ask what's in it."

Sunflower Food Company Homecoming Bacon-Bacon Country Dip Mix

Directions: Blend package with 2 cups sour cream until smooth. Refrigerate for 1 hour for spices to

Note: Yogurt or cottage cheese that has been whipped in a blender may be substituted or use 1 cup mayonnaise and 1 cup sour cream for a richer flavor. Yield 2 cups.

The winner each week is selected from the recipes printed. Send us your favorite recipe. It may be a main dish, leftover, salad, side dish, dessert, or what-have-you. 1. Check your recipe carefully to make certain all ingredients are accurate and instructions are clear. 2. Be sure your name, address and phone number are on the entry. Please include a street address with your recipe entries. A post office box number is not sufficient for prize

3. Send it to: Woman's Page Editor, Grass & Grain, Box 1009, Manhattan, KS 66505. OR e-mail at: auctions@agpress.com

delivery. Allow 3-4 weeks for delivery.

Blakeslee **K-State Research** grow and multiply," consumers to consider and Extension stocking up on non-per-Blakeslee said. news service "Without power, the ishable foods and dis-MANHATTAN options are limited to posable utensils for Kansas State Universian emergency. Some

ty food scientist Karen Blakeslee says preparing and storing food during a power outage can be "tricky."

"Without a steady power source (such as a generator), food can be temperature-abused, which increases the risk for foodborne illness," said Blakeslee, who also is coordinator of K-State's Rapid Response Center for Food Science Foodborne bacteria

grows most rapidly between 40 degrees and 140 degrees Fahrenheit, Blakeslee said doubling in number in as little as 20 minutes. "This temperature range is often called the 'Temperature Danger Zone," she said.

When power fails, "refrigerated and frozen food warms or thaws and can allow potential bacteria to

cook food indoors," she said. "A fireplace can be used with wood or gas to grill food, or you can wrap food in foil in the fireplace."

However, if using a fireplace, she cautions: "Do not use charcoal in the fireplace because it can emit carbon monoxide. Be sure the fireplace flue is open during use. Otherwise, use foods you don't have to cook or keep cold. Only prepare enough food for one meal so that you don't have leftovers.'

Meat products must be cooked to the proper internal temperature to assure safety. The food safety recommendations include:

- * 145 F for steaks, chops and roasts.
- * 160 F for ground meat. * 165 F for all poultry.

fruit cups and pudding - are easy foods to store for an emergency." Once canned goods are opened, they must used, especially canned meats, fruits and vegetables. "With-

out refrigeration, the

leftovers can not be stored for later use," Blakeslee said She also reminded consumers of one

of the most basic food safety steps: Wash your hands. "If running water

is not available, disposable wipes or hand sanitizers can be used. Pack some extra bottles of water and soap in your emergency kit."

Blakeslee publishes a monthly newsletter called You Asked It! that provides numerous tips on being safe and healthy. More information is also available from local Extension offices in Kansas.

Recipes and Ramblings from the Farm

Mini Peanut Butter Cup Cheesecakes

By Ashleigh Krispense Spring is here and the itch to be outside planting in the garden or working around the yard is strong. From the kitchen window, I've been watching little birds sit on the edge of the bird bath I set out in the flower bed last night and take a drink. While I've been working in the yard recently, the guys have been hard at work getting corn into the ground. The busy season is quickly ap-

proaching and before

and tractors! Today's recipe is based off of a simple, mini cheesecake recipe that I found tucked away on a piece of paper in my kitchen cabinet. It's varied a bit from the original but still quick to whip up. I made some with both Oreo cookies and vanilla wafers for the crust and can attest that both are tasty, but the Oreo cookie adds some extra flavor and pairs well with the peanut butter cup! While I haven't tried it yet, in the future I'd like to make a chocolate cheesecake batter and try it with the peanut butter cups in the center. Can you say overload? Ha! It won't be for the faint of heart.

(This recipe only makes 12 mini cheesecakes.)

12 vanilla wafers or Oreo cookies

1 1/2 (8-ounce) packages cream cheese, softened

1/4 cup sugar

a lower rack.

2 eggs

1/2 teaspoon vanilla extract

12 mini peanut butter cups, unwrapped

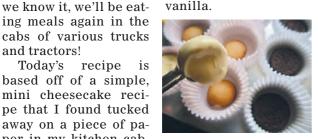

Preheat your oven to 350 degrees and set a dish of water inside on

Line a muffin tin with paper liners and place a wafer or Oreo cookie in the bottom of each cup.

Beat together the softened cream cheese and sugar until fluffy. Add in the eggs, one at a time. After eggs are incorporated, stir in the vanilla

filling Spoon the into muffin cups until 3/4 full. Push an unwrapped mini peanut butter cup down in the center of each cup.

Bake in a preheated oven for 15 minutes or until a toothpick comes out of the cheesecake filling clean. Let cool and refrigerate until thoroughly chilled. En-

Kansas Profile - Now That's Rural: Dawn Halla, Oskaloosa Flower Farm

By Ron Wilson, director of the Huck Boyd **National Institute for Rural Development at Kansas State University**

"You raise me up..." say the words of a popular song by Josh Groban.

Those words would also be an appropriate way of describing a rural Kansas woman who is raising flowers with the goal of raising the spirits of her custom-

Alexander Dawn Halla is the founder of Oskaloosa Flower Farm in Oskaloosa. She has had a long journey to Kansas. Originally from Trinidad, she married a man from Maine. They lived for a time in Ireland. Their daughter married a man from Kansas.

Unfortunately, daughter came down with Crohn's disease and was trying to care for her baby at the same time. The Kansas in-laws asked if Halla would move to Kansas to help the family. She chose to move and the family ultimately settled in Oskaloosa near her grandchildren.

While living in Ireland, Halla had worked as a horse trainer and noticed that holistic land management seemed to help the health of the horses. When she got to Kansas, she decided to apply those principles in raising flowers.

"I love flowers," Halla said. "I love the connection with the earth." Her goal is to use permaculture systems and practice regenerative agriculture.

"The idea is leaving the land better than you

found it by managing the land holistically,3 Halla said. She hopes to improve the soil profile by building natural bacteria and microbes in the soil.

Many consumers are interested in local foods. Halla points out the benefits of local flowers as well.

Many flowers must be shipped long distances to get from growers to the ultimate end users. "A lot of flowers are shipped in and need to be sprayed for pests," Halla said. She seeks to raise flowers that are popular but are difficult to ship, so it is a win-win situation when they can be grown locally.

"I love growing unusual flowers and flowers that are hard to ship," Halla said. Lisianthus, zinnias, and ranunculus would be examples.

"The lisianthus is an incredibly beautiful flower," Halla said. It is sometimes called the "super rose." Ranunculus is another one that looks like a fancy rose.

"I'm going through experimental phase," Halla said. "I'm working on perennializing lisianthus.'

Flow-Oskaloosa er Farm recently received an Environmental Quality Incentives Program grant (known as EQIP) from the U.S. Department of Agriculture to build a high tunnel. She currently sells her flowers at local supermarkets and farmer's markets. Eventually she hopes to have a you-pick operation.

"My goal would be that florists could also come to the farm for

flowers they could use," Halla said. She also plans to operate a mobile farm stand in 2024.

"Our locally grown flowers tend to last longer," Halla said. "Then there are sweet peas which don't last as long but have wonderful scent."

"It's lovely seeing incredibly beautiful flowers grow from the tiniest seed. I want to have phenomenal flowers and have them in as many homes as possible. They can brighten someone's day or week."

Halla has other creative ideas as well. "What if you could have an edible bouquet of flowers?" she said. "You could have pretty flowers and, if you wish, you could pluck off a petal and add it to your salad.'

Her plan for this spring is to have her grandchildrens' school classes come to the farm. "We live on a beautiful piece of property," Halla said. "The children could pick flowers for their mums

for Mother's Day." "Flowers can lift people's mood so dramatically. I love seeing the joy that flowers

bring to people." It is good to find this floral entrepreneur in a rural community such as Oskaloosa, population 1,110 people. Now, that's rural.

For more information about this ruralpreneur, look for Oskaloosa Flower Farm on Instagram.

You raise me up. Those are the words of a popular song, and they also describe the effect of this ruralpreneur's flowers on her customers.

We commend Dawn Alexander Halla for making a difference by caring for the land while producing beautiful flowers in this way. The results give me a

lunteer wheat harbors wheat streak mosaic virus

By Jacob Klaudt, K-State Research and **Extension news service**

The wheat streak mosaic virus, transmitted by wheat curl mites that reside in volunteer wheat, poses problems for producers and requires thorough management, according to Kansas State University wheat disease specialist Kelsey Andersen

"They kind of are this family of viruses that are vectored by a tiny mite that we call the wheat curl mite. They all cause really similar symptoms. They cause some yellow and green streaking in our wheat plants. This is really a disease that can blow into your field in be a big problem," she

The wheat streak mosaic virus family consists of wheat streak mosaic, Triticum mosaic and high plains wheat mosaic viruses.

Volunteer wheat, or wheat leftover from past crops, houses the wheat curl mite. Mite populations, ultimately, depend on the amount of volunteer wheat within an area.

"If you had some wheat in a neighboring field that survived after harvest, or maybe it was hidden in some double crop field nearby, that's where those curl mites survive. They can then

either the fall or the early spring and that's typically when we start to see damage," Onofre

Onofre highlights an avenue for initial identification of wheat streak mosaic. Producers can have wheat samples tested at the K-State plant pathology diagnostic laboratory for official results.

"You get kind of a fan appearance, so it kind of is worse on the edge of the field and gets progressively better as you move towards the center of the field,' she said

If a producer identifies wheat streak mosaic within their wheat crop, Onofre suggests they evaluate the potential crop yield. To proper determine crop yield, refer to the Kansas Wheat Variety

"If you see the symptoms in the fall or the early spring, you're probably going to see more yield loss in that part of the field," she

Warm weather conditions induce the appearance of wheat streak mosaic within fields. While plants may be infected during the winter and times of cold, hot temperatures activate the viruses' symptoms.

"Usually, we don't see that streaking symptom until the weather starts to warm, so we can have some infection cooking there over the winter," Onofre said.

Increased moisture and other weather events during the 2023 harvest contributed to more volunteer wheat and desirable condi-

HAY & LIVESTOCK HANDLING EQUIPMENT

tions for the wheat vest. That hail knocked streak mosaic virus to thrive in the current growing season.

'We had some unfortunate rainfall right around harvest, so that kept wheat in the field a little longer than we might have wanted to see it. We could have had some shattering or some volunteer from that wheat being left," Onofre said. "We also had hail, so there were swaths of hail that came in prior to harthat wheat right out of the plant and that will cause some volunteer to emerge."

Other wheat diseases that experts encourage Kansas growers to watch for include wheat soilborne mosaic virus, wheat spindle streak mosaic virus, barley yellow dwarf and stripe rust. More information is available at local Extension offices in Kan-

NASS discontinues select

The USDA's National Agricultural Statistics Service (NASS) is canceling the July Cattle report and discontinuing the Cotton Objective Yield Survey, as well as all County Estimates for Crops and Livestock beginning with the 2024 production year. The decision to discontinue these surveys and reports was not made lightly, but was necessary, given appropriated budget levels.

NASS has and will continue to review its estimating programs using criteria focused on the needs of its mission and customers to prioritize budget decisions. Information about all NASS surveys and reports is available online at www.nass. usda.gov.

Prescribed burn as a management too

By Kaitlyn Hildebrand, **River Valley Extension** District, livestock production agent

Prescribed fire or prescribed burning season in Kansas begins in late February and continues through mid-April. Research and experience have shown that fire can be used as a major management practice for native and introduced grasslands, hay meadows, and establishing and managing new native grass stands. It can recycle nutrients in old plant growth, stimulate tillering, control many woody and herbaceous plants, improve grazing distribution, reduce wildfire hazards, improve wildlife habitat, and increase livestock production in stocker operations. To gain these benefits, fire must be used under specified conditions with proper timing.

Kansas hog inventory up six percent in March

Kansas inventory of all hogs and pigs on March 1, 2024 was 1.97 million head, according to the USDA's National Agricultural Statistics Service. This was up 6% from March 1, 2023, but down 1% from December 1, 2023. Breeding hog inventory, at 175,000 head, was up 17% from March 1, 2023, and up 3% from last quarter. Market hog inventory, at 1.80 million head, was up 5% from last year, but down 1% from last quarter. The December 2023-February 2024 Kansas pig crop, at 970,000 head, was up 18% from 2023. Sows farrowed during the period totaled 84,000 head, up 5% from last year. The average pigs saved per litter was 11.55 for the December-February period, compared to 10.25 last year. Kansas hog producers intend to farrow 80,000 sows during the March-May 2024 quarter, unchanged from the actual farrowings during the same period a year ago. Intended farrowings for June-August 2024 are 86,000 sows, down 1% from the actual farrowings during the same period a vear ago

BERNING AUCTION, INC. PO Box Q, Leoti, KS 67861, 620-375-4130

Prescribed burning must be integrated into grazing management to gain the full benefits. Combining stocking rate with prescribed burning will allow the desirable vegetation to be competitive and help reduce the encroachment of many undesirable plants. Prescribed burning might be one of the best management practices for the overall health of grassland. However, some precautions need to be taken not only for the safety of those involved in the burning process but also for the surrounding areas to make sure prescribed burn areas don't get out of hand. Here are five steps to a safe prescribed burn.

Step one: develop a plan to include how many people and how much equipment you will need, working with neighbors to burn at the same time, and contacting your local emergency agency to

AND

the existing farmstead

MIDWEST LAND&HOME

obtain the appropriate permits. Make sure everyone involved in the burn is wearing proper clothing, their communication devices have been secured and they understand the burn plan, which should include who to contact if the fire gets out of control. Before considering burning, determine if site and moisture conditions are appropriate.

Step two: prepare the site by creating adequate firebreaks. Firebreaks can be mowed, disked lines, roads (not highly traveled blacktop roads), or other natural firebreaks. If trees or other brush is present near the firebreak, they must be cut, and the firebreak width significantly increased. All dead trees near the firebreak must be cut.

Steps three and four: observe the weather before burning. Know the weather conditions on the day of the burn and two to three days

AUCTION

SELLER:

TUESDAY, APRIL 30, 2024 — 10:00 AM

Community Building — WHITE CITY, KANSAS

following. Understand how weather conditions can affect your burn days. Good information about daily fire weather can be found on the National Weather Service site. Closely look at the hour's weather graph to determine wind speeds, direction, and humidity for the burn day and two to three following days. The sweet spot for prescribed burning is wind speeds between eight to 13 mph and humidity greater than 30 percent. If a storm front with shifting winds is approaching, consider delaying the burn due

after the burn. Step five: check and re-check the site two to three days after the burn. Before leaving

to potential rekindling

the burn site for the day, extinguish any burning material within 100 feet of the burned edge. Remember to never burn at night as darkness prevents the drivers of vehicles or personnel on foot from being able to find their way, see obstacles and landmarks, judge distances, and assess the overall fire situation. Preparation and understanding are key when doing a prescribed burn to ensure the fire does not get out of hand and create an even bigger problem like a wildfire. If you have any questions, please contact Kaitlyn Hildebrand in the Concordia office at 785-243-8185 or khildebrand@ ksu.edu.

RIFAT FSTATIF AUCTION

TUESDAY, APRIL 30, 2024 * 6:30 PM

AUCTION LOCATION: Held Onsite at 726 Leavenworth, MANHATTAN, KS

DESCRIPTION A gem in the heart of Manhattan! Two and a half stories of potential grandeur make this 1917 beauty a must-have, setting atop a full basement. Enjoy having the primary bedroom, laundry and bath on the mair floor with three more bedrooms and a full bath around a landing on the second full floor. From the landing you also access an enclosed porch

with stairs to the attic. The kitchen is fully remodeled with a thoughtful design, custom wood cabinetry and all the appliances in place. Both baths are also remodeled making the house comfortable to live in while you put your own finishing touches on the rest of the rooms. Nice backyard space with alley access and a one car detached garage. Back door is on the NW corner near the garage and is a split level entry to the kitchen and the basement. Off street parking spaces are the bonus!

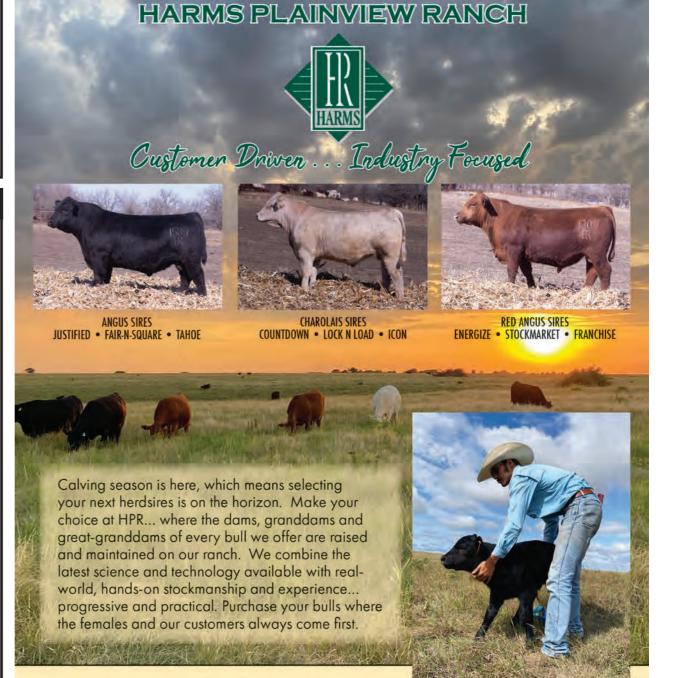

REAL ESTATE TERMS: Property sells AS-IS, WHERE IS. 5% non-refundable down payment is required on the day of sale by check. Buyer must be able to close on or before May 31, 2024. Buyer needs a bank letter of loar approval or funds verification. Cost of Owner's Title Policy to be split equaly between Buyer and Seller. Buyers are responsible for understanding all zoning, building & other regulations associated with the property prior to the day of auction. All announcements day of sale take precedence over writter naterials, Crossroads Real Estate & Auction LLC is representing the Seller.

UPCOMING 2024 AUCTION DATES: JUNE 15 * AUGUST 24

Kansas corn growers intend to plant 5.70 million acres this year, down 1% from 2023, according to the USDA's National Agricultural Statistics Service. Soybean planted acreage is expected to be 4.25 million acres, down 4% from last year. Winter wheat acres seeded in the fall of 2023 are estimated at 7.70 million, down 5% from last year. Sorghum growers in Kansas intend to plant 3.35 million acres, down 7% from a year ago. All hay acreage to be harvested is expected to total 2.40 million acres, down 14% from last year's acreage. Sunflower producers expect to plant a record low 24,000 acres, down 29% from 2023. Oil varieties account for 20,000 acres, down 29% from a year ago and a record low if realized. Non-oil varieties made up the balance of 4,000 acres, down 33% and a record low if realized. Oat intentions are estimated at 195,000 acres, up 5%from last year. Canola planted acreage is expected to be 8,500 acres, up 467% from 2023. Barley area planted is expected to be 18,000 acres, up 13% from last year. Cotton producers expect to plant 110,000 acres, down 2% from a year ago. Estimates in

SERVICE

Wetmore, KS Contact 785-547-5082

For all Your Fertilizer, Grain & Seed Needs

ago I made a deal with a large veterinary pharmaceutical company to warehouse some cattle for a few weeks for a vaccine project they were working on. The prescreened 'naïve' (unexposed by vaccine or natural contact) cattle had to have weekly titers for IBR tested for, and any positive cattle were disqualified from their project and fell out of the program. Those calves were shipped off by the company. The weekly "clean" selection was taken to their facility a few miles down the road where they would be used in the project.

Our ranch cattle had been moved completely out of the area, so there were no common fences or water sources, and the project cattle were basically quarantined. Nevertheless, the number of cattle which developed titers was quite high with only about half of them qualifying for the research proj-

The cattle arrived at 2 a.m., during a December blizzard, of course. They had been shipped from Amarillo, Texas, and were running about three hours late due to the weather, which they had driven in since about Oklahoma City. The snow depth was at least seven inches upon arrival and didn't show any signs of stopping.

There were five trucks lining up on my county road. Our shipping and receiving area can accommodate two if the drivers work it right, and the lane coming in must be left open

for the first truck in to escape before more approach. I had made the mistake of leaving the gate open and before I could get the line-up stopped, I had three pot loads of cattle sitting on a one-lane driveway, nose to tail. This left two trucks sitting on a fairly high traffic, no-shoulder, county road in a blizzard with visibility down to about 100 feet. We would need to back one of those trucks back out on the road in a little while. I called the sheriff's department and asked for a couple of cars to come warn traffic while we maneuvered and unloaded these trucks.

I stopped the leader just in time to warn him that he must swing wide

the grade of our parking lot, and this much snow under tread. DO NOT STOP until you circle around and get lined up to the chute! Nope. This fella didn't want to drive on the adjacent yard so he stops in order to back under the trailer to get a sharper turn. With fifty thousand pounds of yearling calves aboard. you can imagine that the drivers under that tractor would not grab a piece of underlying gravel with a now tightly packed two-inch coating of snow/ice, and the rig slid very nicely into a tight jackknife position, locking itself

as possible, and with

Now the back end of that pot is nowhere near my loading chute and at a 90-degree angle about 40 feet away, pointing at an 80-foot stretch of barbed wire fence between the barn and the pipe corral. We had a portable loading chute in that barn, that even had good tires on it (This is the most fortuitous part of the story)!

I captured a couple of drivers and we pulled that chute out and put it in place at the gate on the first pot. The end of the chute was pointed directly toward that barbed-wire fence so I got a few more truck drivers to form a human blockade outside the wire fence, just as a precaution to keep the calves from squirting down that ramp right through the fence. "Okay!" I yelled.

There were three calves in the back compartment and they quickly came off that trailer and, yes, squirted right through the barbed-wire fence, between drivers who quietly watched them go by, galloping off into the Kansas night in a blinding blizzard!

"Hold up!" was my next order. As I was wondering how far those mayericks would run I selected about four drivers to follow me down into the corral, wading through hip-deep drifts to bring up a set of portable panels, with which we lined that fence and hoped to funnel the cattle around the truck and into the main gate going into the big lot of the corral. With only one panel remaining I directed it to be placed off the corner of the pipe fence toward the nose of the jackknifed Kenworth, which left about a 20-foot gap between them.

Grass & Grain, April 16, 2024

I still had a piece of chain in my hand for securing panels and picked the two nearest truck drivers to stand in that gap. My frustration factor was high as I placed these two guys with the threat "If anything gets by you I'm gonna chain-whip you both!"

These guys were both big bearded men, much taller, and outweighing me by at least

ARGE ANTIQUE AUCTION

50 pounds. The biggest one with the Mickey Gilley turquoise and feather-decorated hat looked over at the other fella. They both grinned and looked back down at

Page 9

"Oh, I know you boys can take me, but I'll hurt one of ya real bad!" I turned away before they could call my bluff and headed to the other end of the rig checking the makeshift corral along the way for weakness. Satisfied, I yelled up at the jackknife driver to "Let 'em

We got that trailer unloaded without further incident. By 5 a.m. we had the first rig unloaded and back out on the road. We didn't get the last load off until nearly 10 o'clock that morning!

WARREN L. HEINEN ESTATE

Auction Conducted By: THUMMEL REAL ESTATE & AUCTION LLC, 785-738-0067

I had a birthday last week (I did make note of those of you who missed it. For future reference, it was the

Birthdays have a way of making you take stock. At the same time, I have been working on clearing out items in storage - lots of research notes and personal photos.

At a certain age, birthdays are a blessing but the memories become bittersweet with the memories of those long gone, projects never finished, moments of triumph and grief.

When I look back at all those different people I was at different times in my life, I wish I could tell my former

self how quickly the time would pass and to notice the blessings that were in that moment. Sometimes I realized how blessed I was, but not often enough.

I have been blessed to have incredible experiences - to travel, to see interesting landscapes and architecture. But I am most grateful for the blessings of those who have shared their time on earth with me.

Since living in Kansas, I have been blessed by the people who have shared their time on earth with me, their passions for their towns and stories, their research, their discoveries, their songs, their ideas.

yond what I deserve. Thank you.

Historian in Residence at Deb Goodrich is the the Fort Wallace Muse-

NMPF FMMO modernization comments put farmers first

The National Milk Producers Federation, the largest U.S. dairy-farmer organization and the industry's premier policy voice in Washington, submitted its final, formal legal "brief" on their behalf for Federal Milk Marketing Order (FMMO) modernization to USDA.

The NMPF brief, which was submitted March 29 and hand-delivered to USDA, emphasized that those farmers are the reason the system exists -- and that, by law, their priorities are pre-eminent in USDA consideration of a final

"Our proposed package of proposals to the Federal Milk Marketing Order align thoroughly with its mission and purpose, which were intended to put farmers first," said Gregg Doud, president and CEO of NMPF. "We've spent nearly three years painstakingly assembling the broad consensus among dairy farmers that modernization needs to succeed. Our approach is careful and comprehensive, and it benefits farmers of all regions and types of operations."

NMPF's proposals include:

- Returning to the "higher of" Class I mover;
- Discontinuing the use of barrel cheese in the protein component price formula;
- Extending the current 30-day reporting limit to 45 days on forward priced sales on nonfat dry milk and dry whey to capture more exports sales in the USDA product price reporting;
- Updating milk component factors for protein, other solids and nonfat solids in the Class III and Class IV skim milk price formulas;
- Developing a process to ensure make-allowances are reviewed more frequently through legislation directing USDA to conduct mandatory plant-cost studies every two years;
- Updating dairy product manufacturing allowances contained in the USDA milk price formulas; and
- Updating the Class I differential price system to reflect changes in the cost of delivering bulk milk to fluid processing plants.

In contrast to proposals driven by narrow self-interest, NMPF's package of proposals reflect its broad-based membership and consensus-driven approach, which resulted in unanimous approval from its Board of Directors last year. With that unity unbroken, Doud said he looked forward to USDA's consideration of NMPF's solid hearing record which was built along with its recently submitted brief, as well as the department's recommended decision expected at the beginning of July.

"NMPF has taken seriously its role as the policy leader for U.S. dairy farmers and the cooperatives they own, and we continue to draw on the strength of our members," he said. "Today we've taken another big step toward modernization. We continue to look forward to its successful conclusion."

Dancing with Death

When the end-oftrail cattle towns are recalled the names of Abilene and Dodge City lead the conversation. Newton, Ellsworth, and Wichita were all busy cattle centers, but there were other cattle towns that are rarely recognized. The onslaught of settlement and a westward moving state ban against the open movement of Texas cattle had closed the Ellsworth market. Seventy-seven miles to the west Ellis, Kansas was selected by the Kansas Pacific Railway to inherit the cattle trade in 1876.

That ever moving quarantine line, known as "the deadline," limited Ellis to only two years as a shipping point. Dodge City, Ellis's main rival, remained beyond the

BULLS: \$175.00-\$192.50

COWS: \$135.00-\$146.00

deadline mainly due to political persuasion that the cattle town used to convince the state to move the deadline west of Ellis. The move hindered the town's efforts to lure the cattle to their stockyards in 1877. Even so, Ellis was able to attract Texas cattle for one more year.

The quarantine was not completely unwarranted. Rapid settlement by farmers coming into the country around Ellis limited drovers access to the Kansas Pacific stockvards. Between January and April 1878, almost one hundred thousand acres of land had been claimed in Ellsworth, Russell, and Ellis counties. Between 1875 and 1878 the population of Ellis County recorded and increased population of fifteen hundred new residents. However, the cattle business continued to influence commerce on the streets of Ellis.

Farmers were indeed taking up checkerboard squares of land for the most part selecting the most fertile lands. More than 20% of the land in Ellis County was under cultivation in 1878. In reality that meant that large tracks of open prairie (80%) still provided excellent grazing to cattlemen that were willing to accept the new neighbors from the east.

In February of 1878 one hundred ranchmen gathered in the Ellis library to establish the Western Kansas Stock Association to unite in common interest of preserving grazing rights across the western portion of the state. Their herds wintered on the open range west of Ellis County, enabling Ellis to retain a wild and woolly cowboy reputation.

Dodge City may have had a hand in killing the market at Ellis, but that did not stop Ellis cattlemen from visiting

THURSDAY, APRIL 11, 2024

STEERS

the rival town to buy and sell cattle. One such cattle-buying visit resulted in tragedy.

W. C. Oburn had extensive cattle interests near Ellis. Born in Ohio in 1846, William Cummings Oburn was a veteran of the Second Iowa Infantry Regiment. Having enlisted in 1864 as a 17-year-old private he was wounded but came through the Civil War to find work . as a bank clerk in 1870 in Kansas City, Missouri. By 1874 he obtained a position with the meat packing company of J. W. L. Slavens. By the time Ellis opened in 1876 as the recognized cattle market on the Kansas Pacific line Oburn was driving Texas cattle up to a ranch under his management in Ellis County.

Oburn sent a crew to Dodge City in April of 1878 under the supervision of his foreman, a Texas cowboy by the name of Alfred Walker. One of the cowboys in Oburn's employ, John (Jack) Wagner, had a desperate reputation in and around Ellis. John Hungate, Thomas Highlander, Thomas Roads, and John Reece, all

members of the Western Kansas Stock Association were with the Oburn outfit

The trouble began at the Lady Gay dancehall when Dodge City Marshal Edward J. Masterson recognized that Wagner was carrying a pistol contrary to the city's "No Gun Ordinance." Marshal Masterson disarmed Wagner. He turned the gun over to foreman Walker and directed him to "check" the gun with the bartender in accordance with the law.

As Masterson turned to walk away Wagner pulled a "hideout" pistol and rushed the marshal. Masterson turned and grabbed Wagner just as the cowboy raised his pistol and fired into the marshal's abdomen. Even though mortally wounded Masterson returned fire with four quick shots. George Reighard said that from within the Lady Gay the shots sounded like a Gatling gun (an early form of machine gun). Wagner was killed and Walker seriously wounded. The Ellis Standard wrote the week after the killing, "Wagner, who shot Masterson, is well known in this community, he having been engaged in many brawls with parties in this place."

Masterson walked over the railroad tracks to Hoover's saloon on Front Street. He fell at the feet of bartender George Hinkle and fainted. Withing thirty minutes the popular lawman was dead.

In his capacity as Ford County Sheriff, Marshal Masterson's brother, Bat, arrested the rest of the Oburn crew that had been in the Lady Gay. No evidence was found to tie them to the shooting, and they were released.

Walker, the Alf Oburn foreman, lingered in a hotel bed until May 24, 1878. He boarded a train for Kansas City, still under medical treatment and hoping for a full recovery after his harrowing dance with death beyond the deadline on The Way West.

"The Cowboy," Jim Gray can be reached at 220 21st RD Geneseo, KS. Phone 785-531-2058 or kansascowboy@kans. com.
